Oklahoma has the opportunity to save millions of dollars and promote the overall well-being of its unemployed workers by implementing additional best practices in its Unemployment Insurance (UI) program. UI is an often overlooked, yet critical program for employers and employees. UI policy decisions involve not only significant expenditures in the economy, affecting the business climate and economic development, but also the financial, mental, and physical well-being of the unemployed. In designing their UI programs, federal law allows states substantial flexibility that is rarely used. The American Institute for Full Employment has the resources and personnel to help you design and implement innovative UI and workforce programs that make impact. For a comprehensive review and analysis of how to make a difference, please contact us at (800) 562-7752 or info@fullemployment.org.

Effectiveness

On average, UI claimants in Oklahoma did not find their way off of unemployment insurance for nearly three and a half months, and well over one third of all claimants exhausted their benefits. Eight states have < 26 weeks max. eligibility which may impact duration & exhaustion rates.

US Total Jobs & Annual Hires Summary

In an economy of approximately 156 million jobs, US employers made over 69 million hires - more than one hire for every three jobs. Common statistics track only net new jobs, but our dynamic economy creates many more opportunities than just those from net new jobs. Job openings and hiring activity come from a variety of sources normally, including: 1) quits, 2) retirement, 3) moves, 4) firing, 5) total new job creation and other causes.

For the purposes of this report, “States” include the 50 US states plus the District of Columbia, The Virgin Islands and Puerto Rico.

*Rank* is from 1 to 53, with 1 being the best performance per category.

All base data used and developed in this report was sourced from the US Department of Labor and the Bureau of Labor Statistics.
The United States’ average UI tax structure had 216% more socialized costs than the Best 10 states, costing all employers $5.5 billion for such charges.

The percentage of benefit costs not charged to responsible employers, but instead socialized as:
1) Noncharges - the total amount of benefit payments not charged to individual employer experience rating accounts. They often shift to the UI tax system social program costs; such as payments to workers who voluntarily quit.
2) Ineffective Charges - the yearly amount of benefit charges assigned to individual employers that exceed the amount of contributions paid by those same employers in the following year. These charges tend to lessen some employers’ responsibility to pay the full cost of their claims, due to e.g. a maximum tax rate that is too low or an otherwise less responsive tax structure.

The levels of both noncharges and ineffective charges are largely within the control of state policy makers and affect the state’s unemployment rates by raising or lowering: 1) the cost of employing a worker and 2) the cost of laying off a worker.

* Data from the 2018 Significant Measures Report - U.S. Department of Labor Office of Workforce Security

The average UI claim cost in Oklahoma was 3% more than the US average.

Benefits Paid for all weeks compensated divided by the number of first payments.

The average amount of weekly UI benefits paid per claimant divided by the average amount of weekly wages earned.
